

SAIKRISHNAN SANKAR

ssankar49@gatech.edu ♦ [linkedin](#) ♦ [Github](#) ♦ +1(248) 602-3349

OBJECTIVE

Seeking full-time Software Developer/Data Scientist roles starting May 2026.

EDUCATION

Master of Computer Science, Georgia Institute of Technology Expected 2026
Graduate Research Assistant at the Physical Internet Centre, focusing on AI for Supply Chain & Logistics.
Coursework: Advanced Database Systems, Deep Reinforcement Learning, Vision-Language Models, Systems for ML

Bachelor of Computer Science, SSN College of Engineering 2018 - 2022
Bachelor Thesis: A Deep learning ensemble model for real-time NIFTY-50 stock price forecasting [CLERS-NET](#)
Competitive Programming Lead, SSN Coding Club: Held workshops for 100+ students on graph algorithms.

SKILLS

Languages Python, Java, C#, C++, JavaScript, Gherkin, SQL, Bash, VueJS, R, CUDA.

Frameworks PyTorch, Tensorflow, Langchain, Frappe, Streamlit, PySpark, Dash, React, Angular, Redis, Gitlab
Docker, AWS(EC2, S3, SQS), Kafka, Tableau, Power BI, MCP Server, Azure ML, MongoDB, N8N, LLM Agents.

EXPERIENCE

Data Scientist Intern Jun 2025 - Aug 2025
Pullogic Inc. Atlanta, GA

- Built an agentic workflow using firecrawl, openAI and N8N to scrape model data from 800 manufacturer sites.
- Migrated dashboards from Streamlit to Frappe, creating configurable apps for 4+ clients including HD Supply.

Software Development Engineer II Feb 2022 - Jul 2024
Avalara Pune, INDIA

- Led development of “Extractor Studio,” an ETL pipeline transforming 1M+ transactions into AvaTax targets.
- Engineered a dynamic mapper using Angular and C# for the transform layer, driving adoption in 7 projects.
- Elevated automation coverage by 55% through Behavior-Driven Development (BDD) testing using Playwright.

Data Analyst Intern July 2021 - Dec 2021
Viscus Infotech Ltd Indore, INDIA

- Developed a CNN model for cricket no-ball detection using a custom-curated dataset, achieving 95% precision.
- Created an IPL fantasy prediction system using MCDM and knapsack algorithm, increasing accuracy by 37%.

PROJECTS

[Continual Learning with Multimodal Concepts](#) : Combined image encoders (ViT, CLIP) and language (BERT) encoders to generate multimodal embeddings for skin cancer classification. Used Grad-CAM analysis for interpretability.

[Improving Inference in LLMs](#) : Optimized Llama-2 7B inference with LayerSkip, Draft & Verify, and Layer Collapse, enabling 30-layer skipping for an 8% speedup while maintaining model quality.

[MVCC in BuzzDB](#) : Implemented Multi Version Concurrency Control with snapshot isolation for lock-free concurrent reads, validated against traditional 2 Phase Locking via performance benchmarks.

[Flight Delay Prediction](#) : Formulated a two-stage model with RF Classifier (F1: 0.78) for delay prediction and RF Regressor (R²: 0.97, RMSE: 13.24) for delay estimation using flight data, with SMOTE & Random Undersampling.
